

Associating a Color Monitor Profile in Windows

Monitor profiles can be custom-made using a calibration device, which is downloaded. They can also exist as default profiles within the operating system.

1. To apply a color monitor profile in Windows follow these steps.
2. Select the Windows Start button and type Color Management into the search field
3. Select Color Management from the search results
4. In the devices tab, click the Add button
5. Select the profile from the list of installed profiles on the system and click OK

Please note, if the required profile is not available, download and add the profile to your computer.

The profile has now been associated with the device.

Applying a Color Monitor Profile on Mac

To apply a color monitor profile on a Mac follow these steps.

1. Use the spotlight search to find the ColorSync Utility. Alternatively select the ColorSync Utility from the Launchpad
2. Select the Devices tab
3. Select the current display profile
4. Click the down arrow beside Current Profile and select Other
5. Select the required profile and click Open

The selected profile has now been applied to the device
